October, 2016

Dear Parent(s),

We are excited to continue our science curriculum with a study of energy. There will be times the experiments we do involve using food products. The food products may include canned tuna, and baked beans, which will remain sealed in the cans. Students WILL NOT eat during the science labs. Any food used will be a part of the experiment. Students may touch the food products.

There are also labs that have the students using rubber balls, as well as rubber bands and balloons. To avoid using latex, those labs will be done with latex free rubber bands. Nitrile gloves will be substituted for balloons. If you have any concerns about any of this, please contact your child's science teacher.

Sincerely,

Jay Bingaman
Karen Ostrowski
